

I believe the proposal presented in RM-10810 is harmful to the interests of the Amateur Radio Service and for the effective and efficient use of limited available HF spectrum. Therefore, I strongly oppose RM-10810. Among other problems with RM-10810 it would allow essentially full access to traditional CW (A1A) band

segments to unqualified operators, thus harming the general community in these segments with regard to efficient resource sharing. An approach of segregating learners or novices until they achieved sufficient skill would be reasonable and preferable.

Furthermore, a two-license-class system does not adequately match the diverse interests and operating needs of the amateur radio community, even aside from issues of skill level.

Sincerely,

James Knight, W2JLK
